Subject: Willamette River EPA clean-up

I can't think of anything more essential to life than water. For years we have used the Willamette River as a sewer and a place to dump toxic substances. One would think that it is time to clean up the killing substances, and not lessen the facts by soft peddling them.

I walk and boat the Willamette, and want it cleaned up. Fish and animals deserve to have a livable river. Harvests from the river cannot be good for us. We still cannot use the area by St. Johns because of highly toxic creosote. PCBs were intentionally dumped at Ross Island, and the capping is not a solution.

Do not lessen the standards for river clean-up. We need action.
